

Summary

Sika®-5033 Secure is an adhesive and sealer that is resistant to interference and is ideal for use in a variety of security situations.

Substrates

- Concrete
- Stone
- Ceramics
- Brick
- Mortar
- Steel
- Aluminium
- Iron
- Wood
- Epoxy and polyester painted surfaces

Benefits

- Pick resistant sealing
- Anti-vandalism joints
- Gap-filling
- Bonds to a wide range of materials
- Excellent adhesion even in the damp
- Can be applied vertically and overhead
- Shrinkage-free hardening
- Styrene-free
- Applied with standard bulk or heavy-duty skeleton guns
- Excellent water resistance
- Resistant to chemicals, solvents and oils
- Solvent free
- High load capacity

Areas of Application

- Sealing around and between elements of high security furniture
- Sealing of sanitary areas and shower rooms
- Fixing door and window frames
- Fixing handrails, railings, balustrades and supports
- Crack filling and sealing

Sikadur®-5033 Secure Epoxy Adhesive and Pick Resistant Sealer

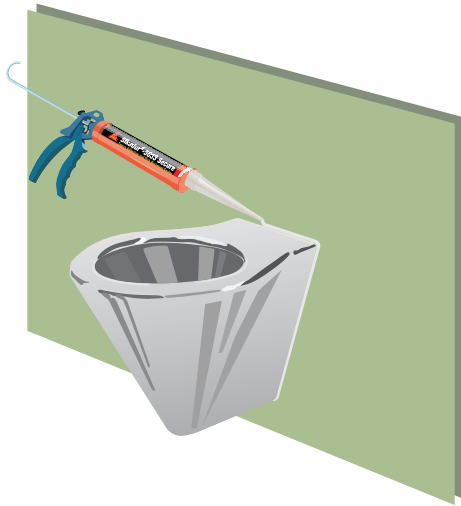

- Easy to use
- Mixed automatically in the nozzle
- High strength
- Excellent adhesion to a variety of substrates
- Quality assured

Introduction

Sikadur®-5033 Secure is an epoxy sealant/adhesive that has enhanced pick-resistant properties whilst still maintaining high strength for structural bonding applications. Its innovative cartridge provides a clean and simple mixing system eliminating the traditional requirement for time-consuming and wasteful manual mixing.

The result is a revolutionary product and user friendly application system that can be used to seal and bond a wide range of common substrates in a quick and easy manner.

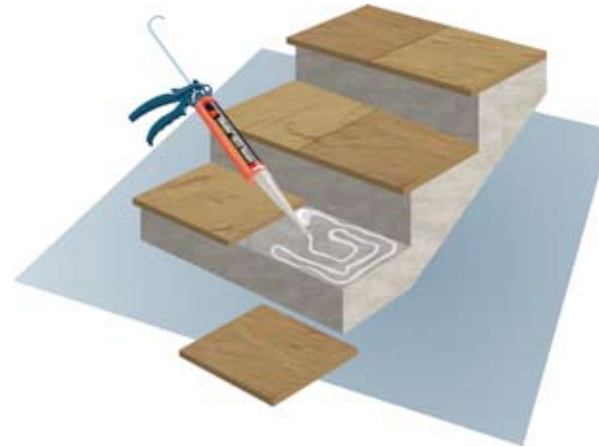

Product Development

Sikadur®-5033 Secure was developed specifically with prison cell, secure accommodation and off-site modular pod construction in mind.

Responding to our specific customer needs for these demanding environments, Sika have developed Sikadur®-5033 Secure. This new product now offers the necessary additional pick-resistant characteristics, traditional sealants and adhesive solutions are not able to fulfill.

The resulting product gives a hard wearing seal, with anti-pick properties and high strength in order to resist repeated attacks and interference.

Applications

In confinement areas, Sikadur®-5033 Secure is not only perfect for sealing and bonding possible exit points (e.g. around windows, doors and ventilators) but also for securing and sealing internal fixtures and fittings to prevent them from being removed and damaged.

Main practical uses

- Sealing of modular and on-site secure accommodation.
- Sealing fixings, sanitary fittings and modesty screens.
- Sealing around secure environment furniture.
- Fixing and sealing secure environment window and door frames.

The tube contains both part A and Part B of the resin in separate compartments

250 ml cartridge size

The two parts are mixed in the nozzle as they are extruded

Colours

Part A	White
Part B	Dark Grey
Mixed Compound	Light Grey
